

Helianthus angustifolius 'Narrowleaf Sunflower

Description

Native status: Oklahoma

Straight species: Yes

WETLAND STATUS: Great Plains- FAC

(Facultative Plants)-Equally likely to occur in wetlands and non-wetlands (estimated probability 34% - 66%)

Genus: Helianthus

Species: angustifolius

Family: Asteraceae

Up to 5'-7'

Sun to Pt. Shade .

Our latest blooming sunflower, Helianthus angustifolius, blooms October up until the first frost.

Our monarch migration will be all over this as they travel south. In winter, it turns into a bird feeder as the seeds provide sustenance to songbirds.

Growing at 5-7 feet tall. Reliable late fall color for Wildlife Gardens or Meadows. Plants are also used as Butterfly Nectar Plants, Butterfly Host Plants or as part of a Grouping or Mass Planting
